

Asphalt Float

Description: This float is designed for construction and asphalt paving. It is the best to be used on hard ground. The vertical back on the drag helps roll larger rocks in front of it instead of riding over them. The back can be used to push for back filling trenches and holes. This float works best with a hydraulic top link to tilt back and forward. The bottom of the back drag is $\frac{3}{4}$ " plow steel and is easily replaceable. We make both standard asphalt floats and ripper floats for heavy duty tasks.

Specifications

- Standard Float: $\frac{3}{8}$ " side plates
- Ripper Float: $\frac{1}{2}$ " side plates
- Adjustable blade with reversible $\frac{1}{2}$ " x 6" grader blade cutting edge.
- Category 2 hitch with replaceable bearings.
- Two-position shanks have replaceable crimp on tips
- Hardened bushings on hitch & pivot points
