

Flynn's Manual Ripper Float

This float is designed for construction and asphalt paving. It is the best to use on hard ground. The vertical back on the drag helps roll larger rocks in front of it instead of riding over the top of them. The back can be used to push for back filling trenches and holes. This float has four USA made ripper shanks that manually fold down and are ready to use. Our customers use these implements in heavy construction settings, and they are built to last.
